

## Reference letter Scandia Steel Baltic UAB

Scandia Steel has since the start 1993 been a supplier of steel to the Nordic market. The company has its roots in Halmstad but now the company is represented in Stockholm and Lithuania. The company's focus today is production of Steel Piling Pipes with production in the factory in Lithuania in the Baltics. Our goal is to be the leading supplier of Steel Piling Piles.

Scandia Steel Baltic started working with Waldec in 2015. Waldec has supplied all our Mazak Turning and Milling machines. We appreciate the professional approach of Waldec's sales representative, Arturas Vaitiekus concerning all our inquiries regarding technical equipment.

For our production to be able to function uninterrupted, Waldec provides Scandia Steel with technical support for our machines. Arnoldas Baublys does regular maintenance and gives technical support for our five Mazak machines.

We are very satisfied with Waldec and the services they provide.

Nerijus Ambrazaitis, Production Director
